PROJECT REPORT

NAME : KONDAPATHRI SUDHAN
REG NO : 25MIM10051
BRANCH : INT M-TECH AI
YEAR : 2025
COURSE CODE : CSE0001
DATE : 27-03-2026

INTRODUCTION

This project is organized into a structured digital portfolio that demonstrates the completion of five key tasks related to digital skills and awareness. The main report (Project_Report.pdf or .docx) provides a comprehensive overview of all tasks. Supporting folders are included for each task to present specific evidence and outputs.

The task-1-presentation folder contains a Canva or Prezi presentation along with a brief description. The task-2-portfolio section includes screenshots of created profiles and reflection notes. The task-3-platforms folder showcases platform usage through screenshots, activity proof, and observations. The task-4-email-etiquette folder provides sample professional emails and a checklist of proper email practices. Finally, the task-5-cybercrime section includes a case study and a prevention checklist, highlighting awareness of online safety.

Overall, this project reflects practical learning, digital literacy, and responsible online behavior.

TASK - 1

This project focuses on understanding digital literacy, useful digital tools for students, and safe internet practices. Digitalliteracy refers to the ability to use technology effectively,responsibly, and safely. In this project, I explored various tools such as Google Docs, Notion, and online learning platforms that help students improve productivity, learning, and organization. I also included important safety practices like protecting personal information, avoiding suspicious links, and using secure passwords.

To present this project, I used Canva, a digital design tool that helps create visually appealing presentations. My design shows key concepts using headings, icons, and simple layouts to make the information easy to understand. I used colors and structured sections to highlight digital tools and safety tips clearly.

One interesting part of making this project was learning how design can improve understanding. However, I found it slightly difficult to choose the right layout and balance text with visuals. Overall, this project helped me improve both my digital knowledge and creative skills.

TASK - 2

I have started using platforms like GitHub, LinkedIn, and Kaggle to build my technical skills and professional presence. GitHub is mainly used for storing, managing, and sharing code. It helps me track my projects, collaborate with others, and showcase my work to recruiters.

LinkedIn is a professional networking platform where I can connect with industry experts, follow companies, and stay updated with career opportunities. It also allows me to present my skills, achievements, and certifications in a structured way.

Kaggle is a platform for data science and machine learning, where I can practice with real-world datasets, participate in competitions, and learn from other users' solutions.

Over the next four years, I plan to actively use GitHub to build a strong portfolio with diverse projects. On LinkedIn, I aim to grow my network and share my learning journey regularly.

On Kaggle, I will improve my analytical and problem-solving skills by participating in competitions and completing datasets.Together, these platforms will help me become industry-ready and enhance my career opportunities.

TASK - 3

I used platforms like HackerRank and Google Forms to support my academic development and improve practical skills. On HackerRank, I regularly practiced Python programming by solving coding problems of varying difficulty levels. This helped me strengthen my understanding of concepts such as loops, functions, data structures, and problem-solving techniques. It also improved my logical thinking and coding efficiency, which are essential for technical subjects and future career opportunities.

In addition, I created surveys and quizzes using Google Forms. Building forms helped me understand how to collect, organize, and analyze data effectively. I learned to design structured questionnaires, use different question types, and review responses through automatic summaries and charts.

These tools have significantly contributed to my academic growth. HackerRank enhanced my programming and analytical skills, while Google Forms improved my data handling and presentation abilities. Together, they have made learning more interactive, practical,

TASK - 4

A situation where poor digital communication caused a serious problem can be seen in a group project scenario. One team member shared important instructions about the project deadline through a vague message in a chat group, without clearly mentioning the exact date and time. Some members misunderstood the message and assumed they had more time, resulting in late submission and loss of marks for the entire group. This issue could have been avoided by using clear and precise communication. The sender should have mentioned the exact deadline, used simple language, and confirmed that all members understood the instructions. Additionally, using structured tools like emails or shared documents instead of informal chats would have reduced confusion. Effective digital communication ensures that information is accurate, timely, and easily understood by everyone involved.

TASK - 5

While researching ransomware and online safety, what surprised me most was how simple actions—like clicking on a fake email link or downloading an unknown file—can give attackers full control over a system within minutes. I also found it alarming that ransomware attacks increasingly target students and individuals, not just large companies, often locking important files and demanding payment through untraceable methods.

Another surprising point was how attackers exploit urgency and fear (such as fake warnings or deadlines) to trick users into making quick, unsafe decisions. This shows that technical knowledge alone is not enough—awareness and caution are equally important.

As a result, one habit I will change is being more careful with links and attachments, especially in emails and messages. I will always verify the source before clicking and regularly back up my important files to stay protected.

CONCLUSION :

Across the recent tasks, a clear pattern emerges: you are developing both technical digital skills and responsible online behavior. Through activities like practicing Python on HackerRank and creating Google Forms, you are strengthening your problem-solving, coding, and data-handling abilities, which are essential for academic and professional growth. At the same time, your work on topics like ransomware, cyberbullying, and online safety highlights an increasing awareness of cybersecurity risks and the importance of protecting personal and financial information.
